CAREER OBJECTIVE

I am a full stack web developer with a Web Development certificate from the University of Utah. I have used my time to design responsive web applications and robust server side applications. I have a solid background in professional work environments where I learned communication skills, task monitoring and logistics.

WORK EXPERIENCE

Freelance Web Developer

2022 - Present

Salt Lake City, UT

- Built a bid calculator application for a Plumbing and Sewer company with React Native.
- Designed and built a web page for a University's Esports Club.
- Designed a Rocket League Esports Fantasy League website for a University's Esports Club.

PROJECTS

Spell Binder- Your one stop shop for Worldbuilding and Writing

- Designed a tabletop roleplaying oriented Worldbuilding and Writing.
- Incorporated Leaflet.js for users to upload and customize maps.
- Developed responsive pages so users can easily navigate their binders on both desktop and mobile.
- Designed a data tagging system so users can categorize their maps, writings and drawings by keywords or color for easy access.

Co Calendar - A calendar share application.

- Incorporated FullCalendarJS to properly show correct calendar information..
- Implemented user authentication, user created calendars with easy calendar share through codes..
- Designed a backend MySQL server to store users, calendars and associated events..
- Built accessible and responsive web pages so users can easily navigate between their personal profile and the calendars they are participating in.
- Displays calendar with several viewing options for optimal accessibility.

Eventify - An Easy Solution to Image Share and Scrapbook Creation

- Developed a user friendly mobile site for image, video and message sharing targeted at large scale events.
- Designed a robust server side application capable of receiving large amounts of data over the course of the event that categorizes all uploaded data by who submitted it.
- Implemented image editing tools for scrapbook creation. With an intuitive file system users can drag and drop edited photos, videos and messages onto separate pages to be saved and shared.
